RE: EXPERIENCE USING PEMFT

Dear Mr. Philipson,

I saw a patient with chronic fibromyalgia, and at the front desk after her second treatment with PEMFT (Pulsed electro magnetic field therapy), I asked her how she felt.

She said that she felt WONDERFUL.

I asked her why she felt wonderful.

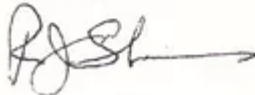

She said "Because I don't feel any pain now."

The patient continues to improve. She just had her third treatment!

I have had good results using PEMFT for fatigue, arthritis and fibromyalgia cases.

Many patients report feeling a sense of well being and being able to sleep better.

Sincerely,

A handwritten signature in black ink, appearing to read 'RJS', with a long horizontal line extending to the right.

Testimonial from Curatron user in Canada

My name is Deni Stewart and I have fibromyalgia.

This syndrome, as FM has been labeled, has completely changed my life and definitely not for the better. The constant pain has been so much of a disabling factor that I can no longer function normally.

One of the many facets of FM is something I commonly call "body hum". If you are a fellow FM sufferer you already understand what I mean. After three treatments this "body hum" has been totally eliminated.

I am extremely grateful to Sheila and the PEMF treatments for enhancing the quality of my life. Now after several more treatments I have found that I sleep more deeply and I have seen moderate changes to my body's overall stability.

The effects of the changes resulting from PEMF treatments have been observed by several health care professionals but especially my chiropractor.

He commented that I am now more capable of holding an adjustment. He also observed that I seem to be much happier in general. And this is the case...I have had a wonderful summer...one I don't think I would have had without PEMF.

Thank you!
Deni S. Canada
